Hi Craig,

Hey we had discussed the possibility of running a macro/amphibian study with the focus on subsidence effects. We agreed that it is too late for the 3rd left panel, but what about the 4th left panel or 5th left pane. The mine plans to be in spring area of the 4th left panel in Dec 2004 and maybe in the 5th left panel in ??? Dec 2005??.

Why don't you look at a mine plan map with the stream overlay and let me know what you think about surveying the area over the 4 or 5th left panels.

Thanks,  
Jerriann
